Update for National Coverage Determinations (NCD)

Stem Cell Transplant for Myelodysplastic Syndromes

The Centers for Medicare and Medicaid Services (CMS) reported on March 6, 2024, that the evidence is sufficient to determine whether to expand coverage for transplantation of blood stem cells from other people, using bone marrow, peripheral blood, or blood stem cell products, umbilical cord for patients with myelodysplastic syndromes, which are a group of cancers in which immature blood cells in the bone marrow do not mature or become healthy blood cells. This benefit is for myelodysplastic syndromes with prognostic risk scores of:

- a. ≥ 1.5 (Intermediate-2 or higher) using the International Prognostic Risk Scoring System, or
- b. ≥ 4.5 (high or very high) using the International Prognostic Risk Scoring System - Revised or
- c. ≥ 0.5 (high or very high) using the International Molecular Prognostic Risk Scoring System (IPSS-M)

Percutaneous Transluminal Angioplasty

The Centers for Medicare and Medicaid Services (CMS) notified on October 11, 2023, that coverage of percutaneous transluminal angioplasty (PTA) of the carotid artery in combination with a carotid stent (small metal mesh tube that expands within a heart artery) or with an embolic protection device approved or cleared by the Food and Drug Administration (FDA) is reasonable and necessary. This procedure is a minimally invasive one to unblock the coronary arteries and allow free circulation of blood to the heart muscle.

This benefit will be considered for Medicare beneficiaries under the following conditions:

- a. Patients with symptomatic carotid artery stenosis $\geq 50\%$; and
- b. Patients with asymptomatic carotid artery stenosis $\geq 70\%$.

For both conditions (A-B) the beneficiary must comply with the following:

1. A neurological evaluation should be performed before and after placement of a stent (small metal mesh tube that expands into a heart artery) in the carotid artery, completed by a neurologist or health care professional certified on the stroke scale, according to the National Institutes of Health (NIH).
2. First-line evaluation of carotid artery stenosis should use duplex ultrasound.
3. Computed tomography angiography or magnetic resonance angiography, if not contraindicated, should be used to confirm the degree of stenosis, and provide additional information about the aortic arch and extra- and intracranial circulation.
4. Intra-arterial digital subtraction angiography (catheter) can be used only when there is a significant discrepancy between the results of non-invasive imaging, or if computed tomography angiography or magnetic resonance angiography is contraindicated.

If you have questions, please contact Customer Care at 1-844-280-5555. TTY users should call 711. We are available 8:00AM to 8:00PM CST, 7 days a week (October 1 – March 31), 8:00AM to 8:00PM CST, Monday - Friday (April 1 – September 30).
